PROFILE

BIM student focused on backend engineering, AI integrations, and scalable application development. Hands on experience building Django and FastAPI applications, REST APIs, database driven systems, and Generative AI workflows using LangChain and Retrieval Augmented Generation (RAG). Currently sharpening skills in LLM integrations, vector databases, semantic search systems, and AI assisted backend architectures.

STRENGTHS AND EXPERTISE

- Python
- Django / FastAPI
- LangChain & RAG Pipelines
- REST API Development
- PostgreSQL / MySQL
- Redis
- Git & Docker
- Vector Databases
- LLM Integration
- Pandas / Matplotlib
- HTML / CSS / JavaScript
- Backend System Design

PROJECTS

LLM-Powered Document Retrieval System

Built a Retrieval Augmented Generation (RAG) pipeline using LangChain, embeddings, vector databases, and semantic search workflows. Implemented document chunking, retrievers, and PDF ingestion pipelines for intelligent document querying.

Sales & Customer Management System

Developed a Django-based management platform for customer records, inventory tracking, vendor management, and sales workflows. Implemented automated email notifications for low stock and pending payments.

AI Code Assistant

Developed backend modules and assistant workflows focused on coding support, resource management, and AI assisted backend logic using Python and Django.

Insurance Premium Prediction System

Built FastAPI based APIs integrated with machine learning prediction workflows and Streamlit interfaces for real time insurance premium estimation.
